Category: computer-and-mathematical

Job Description

Businesses today are adopting the cloud for improved services to their customers. Our purpose is to guide companies on that journey to drive the adoption of DevSecOps so that our clients can remain ahead of the curve. We have an intense focus on engineering fundamentals, whether Developer and Security Operations, Cloud Native Transformation Strategy or Software Engineering & Architecture. This focus allows us to plan and build a solid foundation for companies, resulting in simplified workflows, stronger systems and true future-proofing. Our services help companies avoid costly mistakes to benefit from scalable, performant, and reliable systems that lie at the end of a cloud-native transformation. We have successfully helped many multinational businesses make their journey to the cloud. These companies now have easy access to their data from anywhere in the world, with security second to none.

About the role

We are looking for an experienced Full Stack Senior Software Engineer with a strong background in front-end development to join our Engineering team. We are a small and nimble team, working on multiple projects in the Software, DevOps and Security space. Our clients rely on our technical expertise and ability to deliver value.

As part of the Software Engineering team, you will build software solutions across a multitude of domains, ensuring that each project is done with scalability, maintainability, performance, security and operational excellence in mind. You will also assist in debugging and troubleshooting applications when issues arise in a timely fashion. And

continuously innovate: Search for a better solution. Then top it!

You will report to a Software Engineering Manager who is on a mission to deliver high-value projects built to world-class engineering standards.

What you will be doing:

Demonstrate the ability to pick up more complex software development tasks.

Supports and guides the team to deliver quality code while participating in code reviews.

Write clean and efficient code for backend and front-end applications.

Work with SQL and non-relational database management systems.

Ability to Interact or consume APIs and help design new API services.

Participate in the continuous integration and delivery of applications.

Assist in debugging and troubleshooting applications when issues arise in a timely fashion

Contribute to client meetings and deliver the best service and technology solutions

Log timesheets on Forecast.app for the billing of clients.

Participate in the designing of an architecture that meets the requirements of the problem.

Contribute to mentoring of Interns, Juniors, and Intermediates in order to help accelerate their technical growth.

Consistently writes high-quality production-ready code that is easily testable, reusable, easily understood by other developers, and accounts for edge cases and errors.

Contribute to documentation, functional specifications, and design documents using the modern engineering practices and leveraging the industry-leading technology.

Lead the implementation and maintenance of quality code practices including, but not limited to, practicing test-driven development by writing unit, integration & end to end test.

What you must have:

At least 5 years of experience as a full stack developer.

Experience with modern front-end frameworks such as Next.js and/or ReactJS.

Skilled in fundamental front end languages such as HTML, CSS, and JavaScript.

Proficiency in server-side languages such as NodeJS, TypeScript, and Dotnet. Preferably Dotnet Core.

Familiarity with database technologies such as MySQL, PostgreSQL, and MongoDB.

Knowledge and experience with testing methodologies and implementation.

Experience building reliable and resilient applications at scale within a microservices environment.

Good understanding of architectural patterns and when to apply them.

Knowledge and experience with cloud-based technologies such as AWS, Microsoft Azure, and Google Cloud.
