Internship Opportunity: Python Selenium Django Backend Developer

We are offering a unique internship opportunity for aspiring Python Selenium Django Backend Developers. This position is perfect for those who are looking to gain hands-on experience and delve deep into the world of backend development with a focus on web scraping and automation. Join our team for a challenging yet rewarding 6-month internship, with the potential for full-time engagement upon successful completion.

What You Will Do:

Engage in Django stack development including API, database architecture, and Python scripting.

Contribute to RESTful API development and backend architecture maintenance of our web application.

Collaborate closely with our front-end developers for seamless UI-backend integration.

Take part in database management and architecture tasks for efficient data storage and retrieval.

You will be involved in multiple projects, gaining exposure to real-world applications.

What We Require:

Some experience with the Python programming language, preferably including academic projects, personal projects, or prior internships.

Familiarity with web scraping using tools like Selenium, Bs4, and requests is highly desirable.

Basic knowledge of the Django web framework.

Understanding of HTML and CSS for potential front-end development assistance.

An analytical mindset with good problem-solving skills and the ability to work independently.

Strong communication skills for effective teamwork and project implementation.

Intern Responsibilities in Our Web Scraping Project:

Use Python and Selenium for web scraping tasks to automate browser interactions.

Work within the Django webframework for managing and storing scraped job data.

Develop the user interface of our Django dashboard using HTML and CSS.

Engage in scraping jobs from platforms such as LinkedIn, Glassdoor, and Indeed, under supervision.

Participate in the extraction and management of job data, including handling duplicate listings.

Who Should Apply:

This internship is designed for individuals with some foundational experience in Python and a keen interest in backend development, web scraping, and automation. If you are a motivated learner looking to apply your academic knowledge in a practical setting, we encourage you to apply.
